

Use of ALLIMAX NF feed supplement by dairy farmers.

Results of a field study in Auvergne-Rhône-Alpes region, France.

Results collected and analyzed by Maxence Lassaigne and Maxence Gauthier, BTS students of the Lycée Agricole Brioude-Bonnefont (43100 Fontannes).

ALLIMAX NF contributes to the proper functioning of the immune system. The study considered cows with at least two milk controls (cell counts) done in three months after ALLIMAX NF use. The result is considered positive/ successful if at least one of these cell counts is below 250.

Updated 02/04/24	Clinical and sub-clinical cases observed by farmers	Nb cows controlled	Nb positive results	Rate of cows with at least one control < 250
Use of products from the ALLIMAX NF range during lactation. Results for all products	TOTAL	214	170	79%
	Mastitis (M)	155	130	84%
	HCC (C)	56	37	66%
	e-coli Mastitis	3	3	100%
